

Same geometric prefix, swapped asset markers

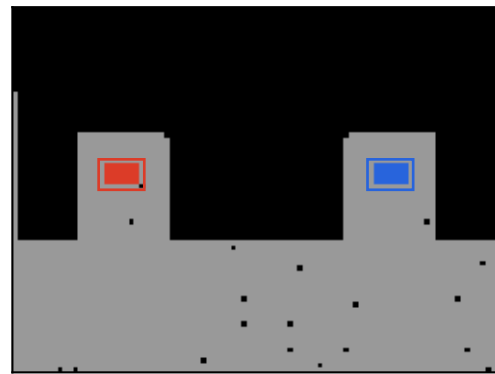

Parent P0 | RGB-D shown: fixed first frame (step 0) | no future route executed

A: shelf west / closed cabinet east

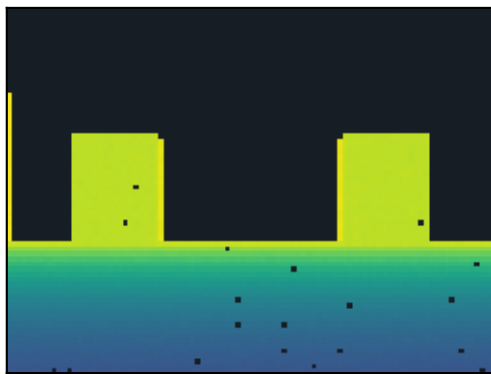

Actual RGB; boxes mark observed identifier pixels

B: closed cabinet west / shelf east

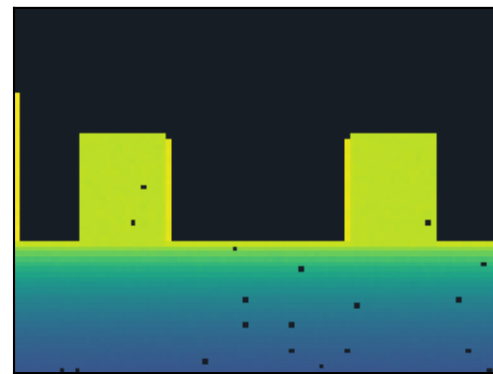

Actual RGB; boxes mark observed identifier pixels

Observed axial depth

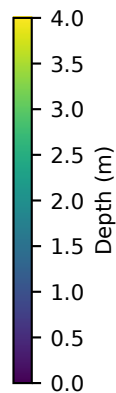

Paired maximum depth difference = 0 m

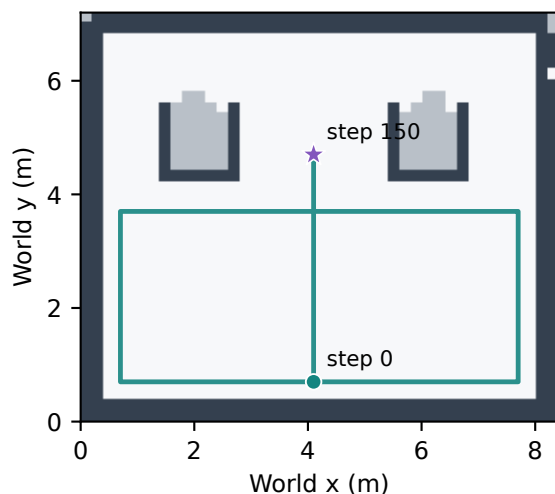

Observed axial depth

Paired maximum depth difference = 0 m

Measured map + actual 150-action path

Observed occupied Observed free Unknown

Complete prefix: same measured map

150 paid actions = 120 moves + 30 turns

Background seen (A / B): 99.22% / 99.32%

2D coverage (A / B): 1.00 / 1.00

New candidate routes executed: 0

Late-stage refinement positive control

Artificial asset-category / hidden-structure prior.

No full-system coverage advantage is established.

Original V8 candidate-role gate failed;

the whole version is retained as a failed preparation.

Blue marker: storage shelf Red marker: closed equipment cabinet

RGB-D and map are archived measurements. Background/coverage values are post-hoc GT evaluation.

No GT geometry, hidden structure, candidate reward or future sensor frame is shown.
