

P02: a paid diagnostic action closes the observation-belief-planning loop

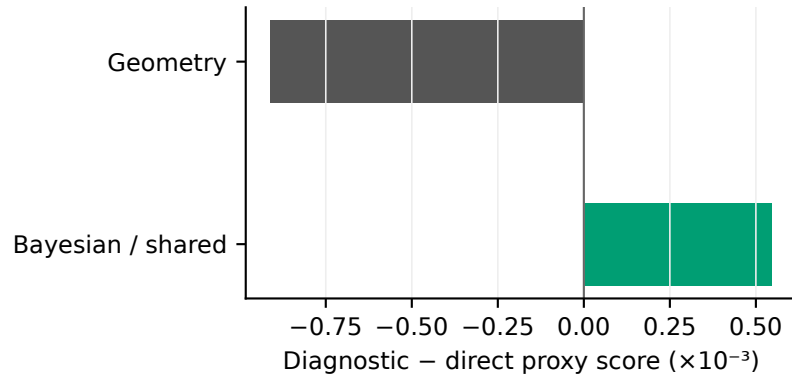

Paid RGB frame 70 · after forward

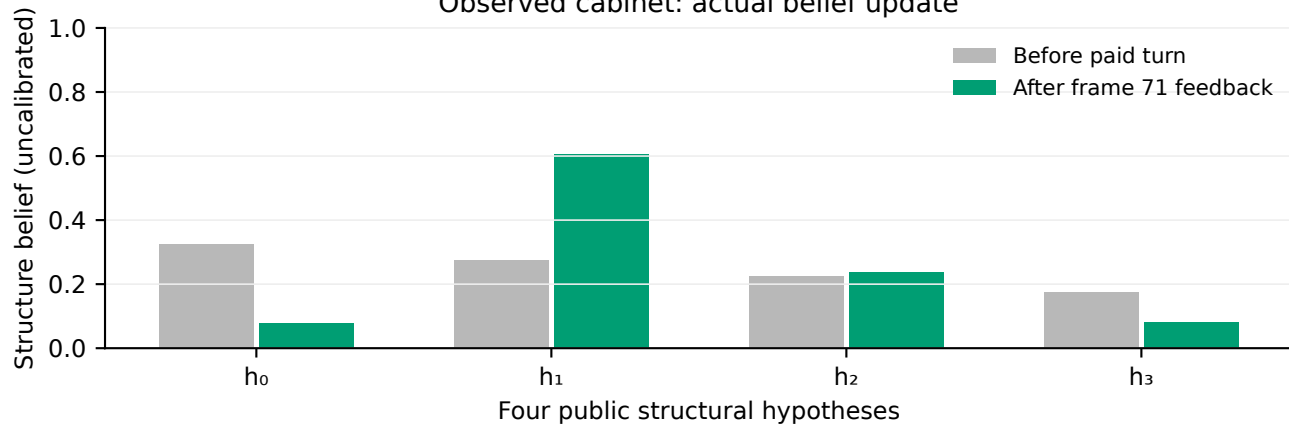

Paid RGB frame 71 · after right turn

Decision after frame 70

Observed cabinet: actual belief update

- 70** Global selection: diagnose
- ↓
- 71** Local turn → RGB-D → belief update
- ↓
- 72** Paid observe → macro complete
- ↓
- 72** Global replanning: direct observation

Bayesian and shared-reliability policies execute the same trajectory. No same-class peer exists at the first divergence.
Proxy-score and belief changes demonstrate execution; endpoint benefit is assessed separately.
