

Same observed geometry, different hidden asset structures

Predeclared training parent T0 • fixed paid prefix: 20 actions • no route outcomes shown

Storage shelves | asset class 2

Observed RGB: visible artificial identifier

Ventilation baffles | asset class 3

Observed RGB: visible artificial identifier

Observed axial depth

Paired depth difference: exactly 0 m

Observed axial depth

Same pose, intrinsics and valid-pixel mask

GT only: horizontal shelves + rear board

GT only: vertical baffles + open rear

GT is used only for this explanatory crop; it is never a planner input.

The GT panels share a fixed rear-side translucent rendering, not a robot observation.

Synthetic asset-category / hidden-geometry association: a controlled positive test, not natural-semantic validation.
