

● G ■ S ▲ SWAP-I ◆ VISTA-I

A Frozen G/S comparison

V36: all four paired conditions

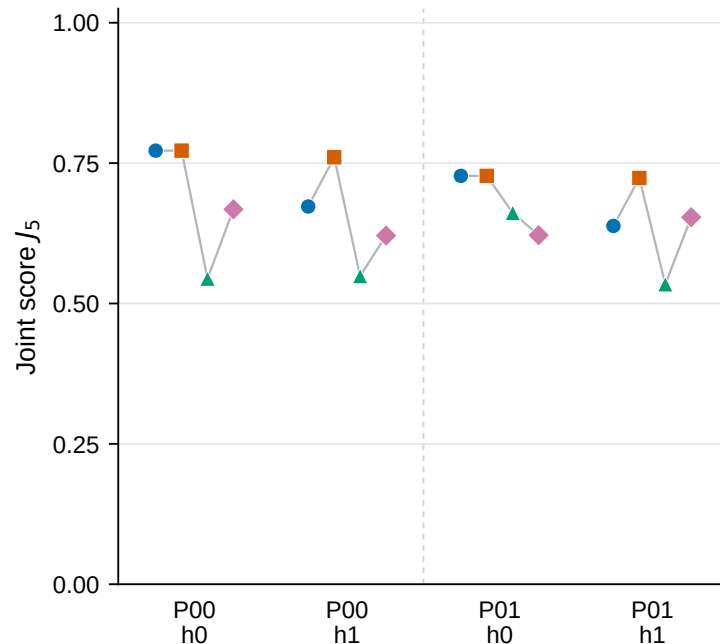

Mean G/S: 0.7026 / 0.7459 (+6.16%); 2 positive and 2 zero differences. $J_5 = C_{map} \times F_{1,5cm}$; all score axes start at zero.

2 seen development layouts; 4 paired conditions, not independent repeats. 42 paid actions per run; replay does not add samples.

SWAP-I / VISTA-I: CPU mechanism adaptations, not original-system rankings. Exact simulated poses; fixed public facility ROI.

B Four CPU mechanisms

V39: condition-matched measurements

C Coverage and quality

V39: the factors of the joint score
