

(b) Screened workcells

ART1_CELL_DEV | Development geometry and public navigation prior

EQUIPMENT / OFFLINE LABELS

- I1** Machine
- I2** Workstation
- I3** Machine
- I4** Workstation

STATIC CLOSE-VIEW COST*

I1	I2	I3	I4
21	49	137	99

*One close-front observation
+ full-pose return, in paid actions.

When is a detour worthwhile?

Screens separate nearby devices
into different travel regions;
close observation can be costly.

Costs are conditional static minima over certified close-front coarse poses, not executed trajectories.
No classification, diagnostic revisit, sensor failure or online planning overhead is included in these static costs.
